

LOOP Q PRIZE SECOND EDITION OPENS FOR REGISTRATIONS FROM STUDENTS FROM EUROPEAN UNIVERSITIES

**This year's AI contest is working on
an artificial intelligence and machine learning
Challenge that aims to solve a globally significant problem**

MILAN / SAN FRANCISCO – April 15th, 2021. Loop AI Group, a Silicon Valley company ranked as a top-tier provider in the industry of cognitive computing platforms, is proudly sponsoring its second student competition, the Loop Q PRIZE, at <https://www.loopqprize.ai>.

While the previous edition targeted students from accredited universities across Italy, this year's competition is open to students from all universities across the European Union and Great Britain.

The goal of the Loop Q PRIZE 2021 edition is on a specific angle: student competitors are required to work on an Artificial Intelligence (AI) and Machine Learning (ML) Challenge that aims to solve a task related to a globally significant problem—such as the pandemic, global warming, or ocean pollution, among other important issues that the world is facing.

With registrations open for another ten days until April 25 at <https://www.loopqprize.ai>, students are encouraged to register quickly to join the challenge and position themselves to display their talent and dispute the prize.

"As a human capacity Cognitive Robot provider, we are living the Future of Work every day. We collaborate with universities and give students real life experience of a work environment with Cognitive Robots and numerous use cases leveraging unsupervised AI. We really appreciate collaborating with the student innovators as they start creating the future already at the universities; we enjoy their curiosity and their out-of-the box thinking.", states Mr. Andrea Pitrone, Chief Customer Success Officer at the main sponsor Loop AI Group Cognitive Computing.

Students who will work in the AI industry will be well positioned to help organizations use and leverage Artificial Intelligence, Machine Learning, Cognitive Computing and Intelligent Automation to grow sustainably and create innovative solutions in any market. This approach in the context of the Loop Q PRIZE 2021 is geared towards delivering a positive impact on the world's most pressing social and environmental issues.

A panel of reputed judges will review participant entries considering aspects such as the level of innovation, application feasibility, and execution of the submitted solution. The Loop

Q PRIZE competition will announce the Grand Prize winner on June 30th, at an online Award Ceremony.

The Grand Prize winner will be awarded Euro 5,000 in cash prize and participants will be able to use this experience to make an important addition to their CV as well as to the refinement of their skills, as they strive to create solutions while competing for the prizes.

About Loop AI Group Cognitive Computing

Loop AI Group is one of the leading providers in the cognitive software industry with operations in Asia, Europe, and the USA. The flagship product, Loop Q, leverages unsupervised AI, serving large enterprises. Loop Q helps augment workforce productivity and automate repetitive processes previously managed by humans in all departments, typically retrofitting the existing enterprise legacy systems with human capacity Cognitive Robots. By embedding Loop Q's human capacity cognitive technology, organizations can now understand and utilize all of their unstructured data, as well as workflow activity data. Loop AI Group Cognitive Computing is headquartered in San Francisco, USA. For more information about Loop AI Group, visit: <http://www.loop.ai>
